

## Plug with lock and chain copper alloys

### Product features:

Material: Copper alloys

Connection type: Plug

Reference: -

EAN13: -

Guillemin symmetrical diameter: 20, 30, 40,  
50, 65, 80, 100

## Plug with lock and chain in copper alloy

**Guillemin's NF E 29-572 PN16 copper alloy fitting** is an essential element for professionals looking for a secure, reliable connection solution for their installations. This locking plug with chain ensures a perfect seal and high resistance to wear, even in industrial environments or extreme conditions.

### Features :

- **Material:** Robust, corrosion-resistant copper alloy
- **Standard:** Complies with **NF E 29-572**
- **Pressure rating:** **PN16**
- **Type:** Locking plug with integrated chain
- **Use:** Compatible with installations requiring hermetic sealing

### Advantages of bolt and chain :

- **Increased safety:** The lock prevents accidental opening.
- **Optimum resistance:** Copper alloy ensures **superior longevity** and **corrosion resistance**.
- **Compliance with standards:** NF E 29-572 certified, guaranteeing **maximum quality and compatibility**.
- **Practicality:** The chain prevents the cap from being lost during handling.

### Use:

**Locking plugs with chain** are mainly used in industries requiring tight connections, such as the petrochemical, chemical, agricultural and fire-fighting sectors. They protect circuits and limit the risk of leakage.

Reliable and robust, **Guillemin copper-alloy fittings** are a first-rate choice for any installation requiring a safe, durable connection.
