

Manikin adult multi-trauma MK2

Product features:

Environment: Land

Age: Adult

Weight: 50 kilos

Reference: 33138
EAN13: -

Multi-trauma training dummies

The **multi-trauma training dummy** is designed to **simulate complex emergency situations**, such as impalement, amputation or serious injury accidents. Specially designed for first-aiders, this mannequin offers a **realistic**, immersive training experience, enabling safe practice of rescue techniques in extreme conditions. This product is an **essential tool** for training health and safety professionals, as well as for emergency rescue teams.

Features:

- **Resistant materials:** Made from high-quality polyester, the dummy is designed to withstand rigorous conditions of use. It meets BS EN ISO 15025:2002, OEKOTEX® Standard 100 and ISO 170501 safety standards.
- **Anatomical, realistic design:** The mannequin features an anatomical weight distribution that realistically mimics the presence of an unconscious person, making training more authentic.
- **Removable limbs:** The limbs (arms and legs) are removable and can be partially or completely detached, offering great flexibility for simulating serious injuries, such as amputations.
- **Compatibility with rescue equipment:** The manikin is equipped with a collar for fitting an immobilization collar, making it easy to perform care and stabilization exercises.
- **Extreme durability:** Designed to be buried under concrete or steel lintels without damage, it is particularly well-suited to exercises in difficult environments, such as urban rescue simulations after a collapse.
- **Easy care:** The waterproof polyester fabric allows quick and easy cleaning after each training session, guaranteeing optimum hygiene.
- **Dimensions:** 50 kilos - 183 cm

Advantages:

- **Realistic feel:** The mannequin's anatomically correct weight and posture provide a close-to-reality experience, enabling rescuers to get used to handling a body in emergency conditions. This improves responders' preparedness and effectiveness in real-life situations.
- **Exceptional robustness:** Unlike canvas mannequins, this model can withstand the most extreme conditions, such as being buried under rubble. This enables rescue scenarios to be reproduced in urban environments or during natural disasters.
- **Enhanced user safety:** flexible joints minimize the risk of injury during training, unlike rigid dummies which can cause bruising or pinching. Trainers and rescuers can therefore concentrate on skill acquisition without fear of accidental injury.
- **Simulation versatility:** Thanks to the ability to partially or completely detach limbs, the manikin can be used to simulate various types of injury, including amputations. This encourages in-depth learning of rescue and medical management techniques.
- **Accessory and customization options:** Additional options such as reinforced protectors, resistant suits or a face mask can be added to increase the level of realism. These accessories contribute to total immersion in emergency scenarios.

These combined benefits make the Multi-Trauma Training Manikin a wise investment for any institution or organization wishing to offer realistic, effective training to its rescue teams.

Applications :

The multi-trauma training dummy is indispensable for a wide range of professional applications:

Emergency services: Used by 100% of fire and rescue services in the UK, it is an essential tool for training

firefighters, first-aiders and paramedics in complex emergency situations.

Military and defense forces: Specified by the UK Ministry of Defense, it has also been adopted by military institutions such as the Norwegian Army and security forces.

International training: This dummy is regularly exported to over 26 countries, including the USA, Australia, Germany and Hong Kong, guaranteeing a quality training experience worldwide.

Private sector and industrial health: Companies and institutions involved in occupational health and safety also use these mannequins to train their teams in risk management and first aid in industrial or high-risk environments.

The multi-trauma training dummy is an **essential investment** for rescue and health professionals. It combines **robust design, versatility and enhanced safety** to deliver a realistic and effective training experience. Thanks to its many features and benefits, this mannequin is ideally suited to the needs of rescue teams, trainers and public or private institutions.

Recognized by professionals worldwide and used by leading rescue services, this manikin is a wise choice to ensure optimum preparation for emergency situations.
