Manikin rescue and dog release

Product features:

 Environment: Land
Weight: 10 kilos

Reference: 35858
EAN13: -

Dog rescue dummy

The **dog rescue dummy** is a training aid specially designed for rescue teams and canine search teams. It can be used to simulate a wide range of emergency situations, including urban, mountain and aquatic rescues. Built to last and withstand extreme conditions of use, this dummy **offers a safe, realistic solution** for training rescue workers and rescue dogs.

Features :

- **Product type**: Dog training dummy
- **Use**: Training for fire departments, rescue services, canine search teams
- **Material**: Water- and fire-repellent polyester
- **Weight**: 10 kg

Advantages :

- **Exceptional durability**: Made from water-repellent polyester, this dummy offers superior strength and durability. It is four times more abrasion-resistant than canvas or PVC dummies, guaranteeing prolonged use even in extreme conditions.
- **Increased safety**: The dummy's flexible joints minimize the risk of pinching and bruising, common injuries

seen with rigid plastic dummies. This allows trainers to carry out exercises without fear of injuring teammates or dogs.

- **Ease of maintenance**: Thanks to its waterproof design, the dummy can be easily cleaned after each training session. This maintains high hygiene standards and ensures product longevity.
- **Extreme resistance**: This dummy is designed to withstand rigorous conditions of use. It can be buried under debris, crushed by vehicles or even dropped from a height of several storeys without sustaining damage. This makes it an ideal choice for rescue simulations in urban or mountain environments.
- **Varied weight**: Availability in three different weights enables teams to adapt to specific training scenarios. Whether for lifting, carrying or extraction exercises, trainers can choose the weight that best suits their needs.
- **Standards compliance**: Manufactured from materials that comply with safety standards including BS EN ISO 15025:2002, OEKOTEX® Standard 100 and ISO 170501, ensuring that the dummy is safe to use in training environments.

Applications:

The dog training dummy is used in a variety of training contexts, including:

First-aid training: It can be used to reproduce realistic scenarios, such as rescues from heights, interventions in flooded areas or operations in difficult terrain. This enables teams to practice emergency situations before facing them in the field.

Inter-agency exercises:It facilitates coordination exercises between different rescue agencies (fire brigades, coastguards, mountain rescue teams). This enhances efficiency and collaboration during real rescue operations.

Rescue dog training: Dogs can be trained to locate and assist a dummy, replicating real-life rescue scenarios. This improves their detection and recovery skills.

Crisis simulations: Trainers can create controlled environments to simulate disasters, such as collapses or car accidents, where the dummy represents a victim to be rescued.

The **rescue dog dummy** is an **indispensable piece of equipment** for rescue teams, whether they specialize in urban, mountain or aquatic rescue. Its **robust design**, **enhanced safety and ease of maintenance** make it a preferred choice for rescue professionals. By enabling **realistic rescue simulations** and a variety of training exercises, it helps to reinforce the skills of rescuers and rescue dogs in real-life conditions. Thanks to its exceptional features, this dummy is a major asset for any rescue team wishing to prepare effectively for emergency situations.
